SDL PHARMACY MANAGEMENT SYSTEM

ABOUT US

We have developed a robust pharmacy management system called SDL Pharmacy. It can be used with Hospital and individual like model pharmacy. There are some pharmacy options connecting hospitals. Single pharmacy and multiple location based pharmacy. For example: OPD pharmacy, IPD pharmacy and General Store for procurement.In a large hospital there may use any spot or requisition based purchase and then stock transfer into OPD, IPD, OT related pharmacy locations. For IPD there may full return facilities from patients. In medium level hospitals they may have a single pharmacy having sales and purchase facilities both. There may 3 types of sales as IPD credit or due sales, OPD cash and Due sales and others day Id based cash sales. There may some return facilities from customers. We have a pharmacy management for individuals as non-connected to hospitals. In model pharmacy or others can use it.
